- Nitoflor® FC150 HP-SL
- Nitoflor Anti-Slip Grains 02
- Nitoflor® N

Fosroc ANZ delivered a technically verified protective coating system for the refurbishment of chemical containment bunds at XXXX Brewery, restoring deteriorated concrete and providing long-term protection against chemical exposure.

THE PROJECT

Chemical containment bunds are critical safety structures designed to contain spills if a storage tank leaks, protecting people, assets and the surrounding environment.

XXXX Brewery engaged Bethell Flooring to refurbish the concrete bunds surrounding its chemical storage tanks. While the project aligned with Fosroc's proven bund coating specification, the site's chemical inventory required additional technical verification to ensure the coating system would provide long-term performance.

THE SOLUTION

Fosroc ANZ's technical team reviewed the site's chemical exposure and confirmed the suitability of the specified coating system before the following work commenced.

- Nitomortar® 903 and Nitomortar® F4 Fillers – restored the deteriorated concrete substrate.
- Nitoflor® FC150 HP-SL – built film thickness and reinforced the protective coating system.
- Nitoflor® N – delivered outstanding long-term chemical resistance.
- Nitoflor® Anti-Slip Grains 02 – improved slip resistance for a safer working environment.

Together, the integrated repair and coating system restored the bunds and delivered durable protection against aggressive chemical exposure.

THE BENEFITS

- Proven protective coating system for chemical containment bunds.
- Project-specific technical verification for demanding chemical environments.
- Excellent chemical resistance with a Novolac epoxy top coat.
- Integrated concrete repair and protective coating solution.
- Slip-resistant finish for improved safety.
- Responsive technical support from specification through to application.
- Australian-manufactured products.
- Manufacturer-backed seven-year warranty.
